

INTERNSHIP REPORT

ON

**AI DATA ANALYTICS AND AI-ASSISTED SOCIAL
IMPACT RESEARCH**

Submitted To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement for the degree of
B.TECH CSE – DATA SCIENCE

Submitted By

PARIDHI VISHNOI

Roll No.: 25SCS1003005133

Batch: 2026–27

Branch: B.Tech CSE – Data Science

Internship Organization: InAmigos Foundation

Role: AI Data Analytics

Internship Duration: 12 June 2026 – 25 June 2026

Mode: Online

Supervisor: Sheen Raza

CANDIDATE'S DECLARATION

I, PARIDHI VISHNOI, do hereby declare that the internship report titled “AI Data Analytics and AI-Assisted Social Impact Research” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in Computer Science and Engineering. The report is based on the work completed by me during my internship with InAmigos Foundation. All references and sources used in the preparation of this report have been acknowledged. I affirm that this report is my own work and has not been submitted to any other institute for any degree or diploma requirement. I shall be solely responsible for any kind of copyright violation in this regard.

Roll No.: 25SCS1003005133

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to InAmigos Foundation for providing me with the opportunity to complete a two-week internship in the field of AI Data Analytics. This internship provided me with practical exposure to data collection, structured data organization, AI-assisted research, social-impact analysis, fundraising outreach, and the identification of volunteer and internship opportunities.

I am thankful to my supervisor, Sheen Raza, and the team at InAmigos Foundation for their guidance and support throughout the internship. I also acknowledge the encouragement and assistance provided by the organization while completing the assigned tasks.

I would also like to thank the faculty of the School of Computer Science and Engineering, IILM University, Greater Noida, for providing the academic framework and encouragement to gain practical industry and social-sector experience. Finally, I express my heartfelt gratitude to my parents and everyone who supported me during the internship.

4. PROJECT DESCRIPTION

4.1 Introduction

The internship was undertaken at InAmigos Foundation in the area of AI Data Analytics. The internship duration was from 12 June 2026 to 25 June 2026 and the mode of work was online. The work focused on applying research, data collection, structured information organization, and Artificial Intelligence tools to topics related to NGOs and social impact.

During the internship, five major tasks were completed. These tasks included research and data collection on NGOs in India, preparation of an AI-powered data analysis report on the role of AI in NGOs, fundraising outreach, compilation of student volunteer and internship opportunities, and the generation of AI-based recommendations for NGO growth. The tasks collectively provided practical exposure to the use of data and AI for solving information and outreach challenges in the social sector.

The internship demonstrated how structured data and AI-assisted analysis can support social organizations in understanding information, improving decision-making, identifying opportunities, and strengthening outreach. It also highlighted the importance of presenting information in a clear and organized manner for practical use.

4.2 Organization Profile

InAmigos Foundation was the organization where the internship was completed. The official internship documents identify the role as AI Data Analytics and describe the internship as a two-week engagement with flexible working hours and remote work arrangements. The assigned responsibilities included completing tasks in a timely and responsible manner, participating in relevant team activities, and maintaining professionalism and confidentiality.

The internship work was centered on social-impact-oriented research and analysis. The assigned tasks involved NGOs, fundraising, volunteering, education-related opportunities, and AI-based recommendations. This made the internship relevant to the application of data analytics and AI in the social sector.

4.3 Problem Statement

Non-governmental and social-impact organizations work with large amounts of information related to beneficiaries, donors, volunteers, campaigns, opportunities, and social issues. However, such information may be scattered across different sources and can be difficult to organize, analyze, and convert into useful insights. Students and volunteers also face difficulty in finding relevant opportunities because information about internships, fellowships, and volunteer programs is available across multiple platforms.

The problem addressed during this internship was therefore the need to collect relevant social-sector information, organize it in structured formats, use AI tools to analyze and summarize information, and generate practical recommendations that could support NGO outreach, fundraising, volunteer engagement, and social impact.

4.4 Project Objectives

1. To understand the working areas and initiatives of NGOs operating in India through systematic research.
2. To develop data collection and structured data organization skills.
3. To explore the use of AI tools for research, analysis, summarization, and insight generation.
4. To understand the role of AI in improving NGO efficiency and social impact.
5. To gain practical exposure to fundraising and donor outreach.
6. To compile useful information about volunteer opportunities, internships, fellowships, and social initiatives for students.
7. To generate practical AI-based recommendations for improving NGO outreach, fundraising, volunteer engagement, and online presence.

4.5 Scope of the Project

The scope of the internship project was focused on research and AI-assisted analysis in the social sector. It covered NGO research, social-impact analysis, fundraising outreach, opportunity compilation, and recommendation generation. The work involved collecting publicly available information, arranging it in structured formats, identifying patterns and applications, and presenting findings in simple reports.

The project did not involve the development of a software application or machine learning model. Instead, its primary scope was to demonstrate how AI tools and

structured data practices can support research, information management, decision-making, and strategic planning for NGOs and social initiatives.

4.6 Technologies and Tools Used

Tool/Technology	Purpose	Tasks Used In
ChatGPT	AI-assisted research, analysis, summarization, and recommendation generation	Tasks 2 and 5; general analytical support
Google Gemini	AI-assisted research and analysis	Task 2
Canva	Preparation and presentation of reports and visual content	Tasks 2 and 5
Grammarly	Language and writing support	Task 5
Structured tables/documents	Organization of collected NGO and opportunity information	Tasks 1 and 4

4.7 System Architecture

The internship workflow followed a simple information-processing architecture. Relevant information was first collected from available sources. The collected information was then organized into structured formats. AI tools were used to support analysis, summarization, and recommendation generation. The final outputs included research reports, compiled datasets, fundraising evidence, and AI-based strategic insights.

Figure 4.1: System Architecture of the Internship Workflow

4.8 Methodology

The methodology adopted during the internship consisted of five task-based phases. Each task was designed to develop a specific skill related to research, data collection, analysis, outreach, or strategic thinking.

4.8.1 Task 1: NGO Research and Data Collection

The first task involved researching and collecting information about ten NGOs working in India. The information was organized into a structured table containing the NGO name, year founded, focus area, mission, website, and location.

The ten NGOs included Magic Bus India Foundation, AROH Foundation, Ladli Foundation, Marpu Foundation, Snehalaya, Pragya, PURE India Trust, PREM, HOPE, and Nitya Foundation. The focus areas represented in the collected data included education and skill development, livelihood, women and child development, environment and community development, rural development, healthcare, human rights, and social welfare.

This task developed the ability to identify relevant information, compare organizations working in different sectors, and organize heterogeneous data into a structured format.

4.8.2 Task 2: AI-Powered Data Analysis Report

The second task involved preparing an AI-powered data analysis report on the topic “AI in NGOs for Social Impact.” The report used Google Gemini, ChatGPT, and Canva. The analysis focused on how AI can help NGOs work more efficiently through data analysis, fundraising, volunteer management, education, healthcare support, and disaster relief.

The report identified applications such as using data analysis to recognize social issues and trends, personalizing fundraising campaigns, supporting online and personalized learning, assisting healthcare services, improving disaster response, and matching volunteers with suitable roles. Examples included UNICEF, the World Food Programme, and Microsoft AI for Good.

The task demonstrated how AI tools can support research, information summarization, and the communication of key findings in a concise and understandable form.

4.8.3 Task 3: Fundraising and Donor Outreach

The third task focused on fundraising. The objective was to connect with potential donors and use creative approaches to generate funds for the organization. Fundraising outreach provided practical exposure to donor communication and the importance of financial support for social initiatives.

Supporting payment screenshots show two successful contributions to InAmigos Foundation: ₹100 on 17 June 2026 and ₹150 on 18 June 2026. Based on the available proof, the total documented fundraising contribution was ₹250.

This activity helped develop communication, outreach, and engagement skills while providing practical understanding of the fundraising process.

4.8.4 Task 4: Volunteer Opportunity Data Compilation

The fourth task involved collecting information on at least fifteen opportunities available to students in India. The opportunities included volunteer programs, internships, fellowships, and social initiatives. The information was organized using fields such as organization name, opportunity type, eligibility, application or website link, and deadline or availability status.

The compiled list included opportunities from iVolunteer, the AICTE Internship Portal, AICTE Samarthan Scheme, Indian Knowledge System, DRDO, Sarva Sandhi Foundation, Hikmat Helping Hands Foundation, American India Foundation, Bhumi Fellowship, NICSI, PM Internship Scheme, Teach For India, Youth for Seva, Make A Difference, and United Nations Volunteers (UNV). The submitted compilation categorized the opportunities as volunteer, internship, fellowship, and social initiative opportunities.

This task strengthened research and information-management skills while creating a structured resource that could be useful for students seeking social-sector experience and professional opportunities.

4.8.5 Task 5: AI Insights for NGO Growth

The fifth task involved using AI tools to identify practical strategies that could help NGOs improve outreach, volunteer engagement, fundraising, and online presence. The tools used in the submitted work were ChatGPT, Canva, and Grammarly.

1. Use AI to Identify Potential Donors: AI can analyze donation records, campaign responses, and engagement data to identify people who may be more likely to support future campaigns.

2. Use AI for Volunteer Matching: AI can match volunteers with projects based on skills, interests, location, and availability.
3. Use AI to Create Engaging Social Media Content: AI writing and design tools can support the generation of captions, posters, videos, hashtags, and content ideas.
4. Use AI to Predict Campaign Performance: AI can analyze previous campaign performance and audience behaviour to support better campaign planning.
5. Use AI Dashboards to Measure Social Impact: AI-assisted dashboards can organize information from donations, volunteer activities, and beneficiary feedback into understandable reports.

The task showed how AI can be used as a decision-support and productivity tool to help NGOs optimize resources, improve communication, and make more informed strategic decisions.

4.9 Expected Outcomes

The internship resulted in the successful completion of five assigned tasks and provided practical learning in data collection, data organization, AI-assisted analysis, research, communication, and social-sector outreach.

1. A structured dataset containing information about 10 NGOs operating in India.
2. An AI-assisted report explaining the role of AI in NGOs and social impact.
3. Practical fundraising and donor outreach experience, with ₹250 documented through the available payment proofs.
4. A structured compilation of 15 opportunities for students, including volunteer programs, internships, fellowships, and social initiatives.
5. Five AI-powered recommendations for improving NGO donor outreach, volunteer engagement, campaign planning, social media presence, and social-impact measurement.
6. Improved understanding of how AI tools can support research, analysis, summarization, and strategic decision-making in the social sector.

4.10 Certificates of Completion and Supporting Evidence

The following supporting documents and evidence are attached as part of the internship report:

1. Internship Completion Certificate issued by InAmigos Foundation.

2. Offer Letter for the AI Data Analytics internship.
3. Task submissions for Task 1, Task 2, Task 4, and Task 5.
4. Payment screenshots supporting the fundraising activity completed under Task 3.
